

**Business Unit:****We cannot control the wind, but we can set the sails**

For hundreds of years, man has been harnessing wind power. In fact, this is the most widespread renewable energy source exploited. Today, wind energy plays an important role in electricity supply. Modern utilities count on wind farms feeding their production into the utilities' networks.

We are experienced commercial partners of a number of small to medium-size engineering and planning offices acting within the future-oriented renewable energy market. While these offices are our suppliers, funds raising companies can be found among our customers. In fact, we tightly co-operate with the largest German funds raising company specialised in wind energy. From procurement of required assessments and financing to turn-key erection and management of wind farms, our offer includes all services relative to wind energy.

- Acquisition and development of sites
- Examination, evaluation and drawing of concept
- Issue and solicitation of assessments
- Solicitation of legally necessary authorisations
- Selection of appropriate wind energy converter
- Negotiation of purchase and maintenance agreements (general agreements with leading producers of wind energy converters)
- Financing of projects and cost-effective concept
- Energy feed-in and connection to the grid
- Turn-key erection of wind farms
- Wind hedging
- Business management of wind farms
